Master's degree at Rhine-Waal University

Mönchengladbach, North Rhine-Westphalia, Germany

## Summary

Hi, good to see you. Hope you can learn about my workability and qualifications within the next few minutes of your valuable time. Before you give an overview of my profile, I would like to represent a glance at myself.

A skilled, sharp, and dedicated web application developer with many years of personal involvement and 2 years of work experience. Keeps exploring different areas of information technology including data science. R, Jupiter Lab, or an application like QGIS are there on my taskbar while XAMPP or MariaDB always running on my OS. Highly interested to learn new technologies and tools for the analysis and implementation of web applications and Data manipulation-based platforms. Not a born star but steady and humble as I believe the ocean of knowledge just touches my feet.

Masters's student at Rhine-Waal University (Germany), studying information engineering in computer science. Through master's study, innovate and keep learning the power of data science and analysis. Technologies and research related to GIS technologies always interest me with high gravity. Highly interested in a job position that has the scope for learning and improving myself for the company. The capability of understanding new people, company culture to self-improvement, following best practices, and working with anything exciting out of my comfort zone.

---

## Experience
